FARM PRODUCTION AND INCOME OF TURKEYS, 1929-39\*

This is one of a series of reports presenting revised estimates of farm production, disposition, and value of agricultural products. It covers turkeys for the years 1929-39. Turkey numbers on farms and turkeys raised are based on census enumerations. Since there were no census figures on turkeys raised between 1930 and 1940 and no enumeration of numbers on farms in 1930, it was necessary to revise the annual estimates for the period in order to reflect the change in numbers indicated by the census data.

January 1 Inventory Numbers: Inventory numbers of turkeys on farms January 1 are based primarily upon the census enumerations of turkeys on farms January 1, 1935 and April 1, 1940 adjusted for changes in numbers between January 1 and the date of enumeration. The annual changes in the estimates are based mainly upon reported changes in numbers on hand and on the relationship between turkeys raised during the year and the number on hand at the end of the year as reported annually on January 1 by livestock reporters. With the census number of turkeys on farms on January 1, 1935 and on April 1, 1940 adjusted to January 1 and used as bases, this relationship between turkeys raised and on hand was applied to the estimated series of turkeys raised to obtain estimates of turkeys on farms on January 1 for inter-censal years.

Turkeys Raised: The estimates of numbers of turkeys raised on farms are based primarily upon the census enumerations of turkeys raised in 1929 and 1939, considered in relation to the total number of farms reporting turkeys in 1939, either on hand or raised or both. Annual changes are based upon changes in numbers of turkeys on farms June 1 and September 1 as reported by turkey producers, and upon the number raised during the year as reported on January 1 following.

Death Loss of Turkeys on Farms January 1: The estimates of the annual death loss of turkeys on farms January 1 are based on an average per farm loss as reported by turkey producers, multiplied by the number of turkey farms enumerated by the census. Annual changes are based upon changes in the average annual loss per farm as reported on February 1 each year, adjusted to show changes in the number of farms between census enumerations. These losses represent the loss of the breeding stock only, since little, if any, death loss of young birds for market occurs between January 1 and the time of marketing.

Turkeys Produced: This figure represents the net annual farm production of turkeys, or the number raised during the year, less the death loss of turkeys that were on hand at the beginning of the year.

---

\*Prepared by S. A. Jones, Senior Agricultural Statistician, E. Smith Kimball, Agricultural Statistician, Paul W. Smith, Assistant Agricultural Statistician, and Robert F. Moore, Assistant Agricultural Statistician.

Farm Consumption: Consumption of turkeys in the households of farm producers is based on a series of reports received annually from crop correspondents giving the number of turkeys of their own raising that are consumed in their households. The average consumption per turkey farm was multiplied by the estimated number of farms raising turkeys. The annual changes in the number of turkey farms during the period 1929-39 were interpolated from the 1930, 1935 and 1940 census enumerations of farms reporting turkeys.

Sales: The annual sales are equal to the estimated production, less the consumption in the farm household, adjusted for inventory changes.

Prices: Price per head of turkeys is the average annual calendar year price per pound received by farmers, multiplied by the average weight of turkeys sold as reported by special turkey reporters and crop correspondents. The average annual calendar year price per pound of turkeys is an average of the preceding crop year price and the current crop year price weighted according to the estimated quantity of each crop sold during the year. The average annual crop year price per pound of turkeys is computed from the monthly prices received by farmers October 15 to January 15, inclusive, weighted by the estimated quantities sold during these months. These four monthly prices were used to obtain the annual crop year price because most of the turkeys are marketed during these months, and other monthly prices are mostly nominal. The January 15 price was used to reflect all sales after December 31, although a small percentage of turkeys are sold after January 31.

For the period covered by this report, constant monthly weights were used for each State, which were based upon reported sales by crop reporters (1) "for the Thanksgiving market", "for the Christmas market", and "for later marketing" for the years 1930, 1931, and 1932, and (2) "in October and earlier", "during November", "during December", and "January and later" for the years 1936, 1937, and 1938. The data for the years 1926-39, inclusive, were available for all States; the data for 1930, 1931 and 1932 for 35 to 38 States. All value of production and income figures shown are computed by using the same price per head.

Farm value per head of turkeys on January 1, 1929-40 is the average price per head January 1 of all turkeys as reported annually by crop correspondents. The 1929 value per head was obtained by multiplying the 1930 value per head by the factor obtained by dividing the 1929 price per head of turkeys sold by the 1930 price per head.

Per Capita Production and Consumption: The per capita production is computed from the quantity consumed in farm household, plus sales, plus or minus gain or loss in inventory holdings at the close of the year, divided by the estimated mid-year population of the Continental United States.

The per capita consumption of turkeys is obtained from the estimated sum of turkeys consumed in the household of farm producers, plus farm sales, plus or minus change in cold storage holdings and the net import or export balance, divided by the annual mid-year population of the United States.

Average Weight per Turkey Sold: The average weight per turkey sold is estimated from the average weights of turkey hens and toms sold during the year reported by turkey producers in September and the following February.
